

### Updating Master Data for new business

“Before ERP<sup>2</sup> this task simply did not happen because the cost of the effort far outweighed the benefit.”

### Forecasting

“We use reports to find exceptions - materials that need attention. Using ERP<sup>2</sup> we can then tune the data in SAP allowing us to manage that exception”

### Period End Finance

“With our finance team using ERP<sup>2</sup> to enter provisions our reports can be on the MD’s desk two or three days after period end rather than after a week when updating SAP was a manual task.”

## Summary

Using ERP<sup>2</sup> brought huge savings in training, resources and cost for Unipart Rail. Chris Hall was also exceptionally impressed by the way in which Quadrate is in touch with its customers’ needs.

“New releases of ERP<sup>2</sup> bring new capabilities that are genuinely helpful to us, even improvements based on feedback we have given to Quadrate. A good example is the tools for managing logs. In the early days, we were uploading about 200 materials to SAP every day. This entailed the generation of horrendous log files that were difficult to use. I mentioned this to Philippe Jardin and in the next release logs were completely reworked with new tools for sorting, searching, selecting and deleting records. It is refreshing to be listened to!”

## About Quadrate

Quadrate is a software development company specializing in software tools that enable both end users and IT staff to work with their SAP systems more efficiently. An official SAP Software Partner with SAP Certified Solutions, Quadrate’s current product suite facilitate Data Loading, Data Extraction and Reporting for SAP. All our products are unique in that they provide end-users with the ability to perform tasks normally left to highly skilled IT staff.

### ERP<sup>2</sup> for SAP

ERP<sup>2</sup> provides a simple three step process for uploading data into SAP from Excel or Access. Simple enough for the end-user but powerful enough to deal with complex transactions, ERP<sup>2</sup> offers a cost effective solution to immediate and scheduled data uploads without the need for programming or costly IT resources

### Qubed for SAP

Qubed is a data extraction and reporting application designed for both end-users and developers. The simple to use application allows users to step through a transaction to identify the fields which contain the data they would like to extract. Selection criteria can also be added and the resulting data can be extracted to Excel, Access or used in professional looking reports

QUADRANTE CASE STUDY - UNIPART RAIL

## ERP<sup>2</sup> helps it run to timetable

### Situation

Unipart Rail UK Limited is the leading supplier of replacement components in the UK Traction and Rolling Stock aftermarket, managing and supplying a comprehensive range of products from major repairable components, from bogies, wheelsets and engines to consumable components such as brake pads, hoses, filters and lubricating oils.

Unipart Rail handles over 600 accredited suppliers and a product range comprising around 50,000 products held in stock at Doncaster with a daily delivery service to some 90 customer maintenance depots throughout the UK as well as regular shipments to international customers.

A Quadrante customer since 2002, Unipart Rail uses ERP<sup>2</sup> in major uploads associated with new business, such as in forecasting function and in the production of period end reports.

Unipart Rail originally purchased ERP<sup>2</sup> to ease the integration of new business. In 2001 Unipart Rail won a major contract to supply the maintenance firm for a UK train operating company. Unipart Rail became responsible for supplying all the parts required to keep the trains running.

The rolling stock was a new type for Unipart Rail. Integrating the new business involved uploading to SAP the new maintenance contract, thousands of new master materials, new parts, thousands of new supplier relationships and the associated new accounts, accounting and control of materials.

### Solution

"We had become aware through SAP conference that various tools were available for uploading data to SAP," says Chris Hall, Unipart Rail's SAP Manager. "I contacted Philippe Jardin, CEO of Quadrante and found him super helpful. Within a week Philippe had visited us and run a demo in my office."

"We were stunned by the speed, efficiency and ease of use of ERP<sup>2</sup>. The timing was excellent and we used ERP<sup>2</sup> to integrate the new business we had just won."

ERP<sup>2</sup> proved extremely effective for Unipart Rail, bringing savings in training and resourcing, and, most vitally, a huge amount of time and cost by avoiding manual entry. Unipart Rail has since found many additional uses for ERP<sup>2</sup> in its business.
