

Extracting and Reporting on SAP® Data

Qubed™ is a powerful SAP® reporting application that allows end-users to generate enterprise reports for employees, customers and business partners. Qubed enables developers and end users alike to create, distribute and maintain content-rich SAP reports rapidly and easily. Qubed is an SAP data extraction and reporting product. An easy-to-use, three step process is the only requirement to extract your data:

Qubed is designed for all skill levels from business users to technical users, and is easy to use.

Business users do not need technical experience in SAP tables or fields, they can create the query by stepping through a transaction in SAP’s familiar GUI — this will record the fields the user has selected and will automatically create the complete query! For technical users, we provide the ability to create their own joins and manually add tables, structures and fields.

All tables in SAP can be accessed except for system tables. Qubed users can use queries to create publish-ready reports in minutes using the built-in report writer.

Key Business Benefits:

- Reduces costly IT resource requirements
- Empowers data owners to manage their own data
- Improves data quality
- Provides ad-hoc extraction and reporting functionality without any programming
- Uses familiar data management tools, eliminating additional training
- Reduces time to extract and report on data in SAP by eliminating the time it takes to create custom upload programs
- Provides access to data without needing access to SE16 or SQ01
- Allows for quick extraction of data needed in other, non-SAP systems
- Qubed’s automatic structure lookup will look up your transparent table and field for your structures

Do you want to extract data from anywhere in SAP®, and create a report in minutes, including transparent tables, cluster tables, pool tables and views?

Do you want to extract data from SAP structures and do not know the underlying table?

Do you need to create custom joins?

Do you want your multiple table queries to automatically include existing SAP joins?

Are you struggling to extract data from your huge SAP cluster tables?

Are your requests for complex data extractions met with some head-scratching by the IT department?

Do your requests for new reports take weeks or even longer to fulfill?

Do your reports lack a polished look?

If any or all of the above questions are true for you, you need Qubed to take control of your own data in your own time frame!

A Division of BackOffice Associates, LLC

Simple Three Step Process

Extract data from SAP® quickly by following a simple three-step process:

1. Record a transaction using the standard SAP GUI (optional)
2. Create query (manually or automatically)
3. Download data immediately or schedule an upload at a convenient time

Recording Process

Build your query or report by stepping through an SAP transaction in the standard SAP GUI. Qubed™ will automatically look up the transparent table and field for any structures used in the recording process.

Centralized Administration

Provides a simple mechanism to administer the permissions for each Qubed user.

Scheduled Execution

SAP data downloads can be scheduled to execute when the SAP systems are least busy.

Friendly Names

Optionally shows the user-friendly descriptions for all fields and tables.

Query Output Limitation

Limit the number of records that a user can extract from SAP using Qubed.

Query Complexity Restrictions

Set limits on the complexity of the queries each user can create.

Additional Application Security

Qubed can restrict users from accessing data in certain tables even if the user has sufficient SAP authorizations.

Broad Table Support

Allows data extractions from both standard and custom SAP tables. Qubed even deals with cluster and pool tables. Only System tables are excluded.

Multiple File Formats

Data can be extracted to Excel or Access and reports can easily be deployed as PDF, TIFF, HTML or XLS.

Powerful Report Writer

Qubed provides the user with an easy-to-use but powerful report writer to create simple or complex reports with a polished look.

Report Templates

Users can create report templates that can be used to create reports in a particular format.

Centralized Administration

Provides a simple mechanism to administer the permissions for each Qubed user.

Flexible Licensing

Lets you choose a licensing model that suits your individual requirements.

Flexible Pricing

Gives you the full functionality of Qubed for a set number of months. This allows you to use the product on specific projects where mass data downloads from SAP are required.

Automatic Structure Lookup

Qubed's automatic structure lookup will look up your transparent table and field for your structures.

About BackOffice Associates®

BackOffice Associates® is the leading provider of ERP data migration, data governance and master data management (MDM) solutions for Oracle®, Peoplesoft, JD Edwards, SAP®, Infor and other leading ERP solutions. Concentrating on enhancing ERP data quality since 1996, our products and services are the recognized best practice for companies using Oracle, SAP and other solutions. BackOffice Associates delivers the industry's only "Boring Go Live®" process for the uneventful implementation of ERP. For data governance solutions, BackOffice Associates is the choice of customers who require "Business-Ready Data Every Day™".
